# Third Lecture Labour Value: Marxist Capital

#### Capitalism: conflict over surplus

- · Purpose: from defense to destruction of capitalism
- · Labour: from many to one factor of production
- Surplus: history, labour and class conflict
- · Forms of surplus: physical and political
- Political economy: social totality, theory, ideology

## The labour theory of value

- · Surplus and surplus value
- · The Physiocrats and land, the classicists and labour
- · Value and labour time
- · Socially necessary labour
- · Concrete and abstract labour
- Labour power
- Exploitation: labour vs. labour power
- Simple circulation: reproduction of the worker
- Expanded circulation: capital accumulation
- · Constant capital, variable capital and surplus value
- · Value theory and capitalist development
- · Capitalist fractions

#### **Controversies**

- · Value theory: qualitative and quantitative.
- The transformation problem (I): from values to production prices
- Rate of profit, rate of exploitation and the organic composition of capital
- The transformation problem (II): from production prices to market prices
- A labour theory of value without perfectly competitive equilibrium?
- Inner logic: Samuleson's redundancies
- Inner logic: Joint processes and Steedman's impossibilities
- Existence: does labour value exist?
- Existence: can the value equations be specified?

#### Quality and quantity

- · Marx and the neoclassicists: the common ground
- "Bottom up": from production to distribution

## The Neo-Marxist revision

- · Power without value
- · Time to rethink capital

# **Circulation**

Simple circulation: the reproduction of the worker

$$C \rightarrow M \rightarrow C$$

Expanded circulation: capital accumulation

$$M \rightarrow C \rightarrow M + \Delta M$$

Enters production:

$$M \rightarrow C \rightarrow Production \rightarrow C \rightarrow M + \Delta M$$

Decomposition: constant capital (c), variable capital (v), surplus value (s):

$$M \rightarrow C \rightarrow (c+v) \rightarrow (c+v+s) \rightarrow C \rightarrow M + \Delta M$$

# Historical Stages and "Fractions of Capital"

Sheer force: money capital

$$M \rightarrow M + \Delta M$$

Commercial: arbitrage capital and the "extensive" empires

$$M \rightarrow C \rightarrow M + \Delta M$$

Productive: industrial capital and the "intensive" empires

$$M \rightarrow C \rightarrow Production \rightarrow C \rightarrow M + \Delta M$$

#### The Transformation Problem: From Values to Prices of Production

Decomposing the value of a commodity, with constant capital (c), variable capital ( $\nu$ ), surplus value (s), the initial investment (M) and the profit ( $\Delta M$ ):

$$c + v + s = M + AM$$

Rate of profit  $\pi$  (ratio of profit to invested capital)

$$\pi = \Delta M / M$$

Assuming the surplus value (s) is equal to the profit  $(\Delta M)$ :

$$\pi = s / (c + v)$$

**Rate of exploitation**  $\varepsilon$  (ratio of surplus value to the value of labour power)

$$\varepsilon = s / v$$

**Organic composition of capital**  $\theta$ (ratio of constant capital to variable capital, or "mechanization")

$$\theta = c / v$$

Divide the numerator and denominated of the rate of profit equation by v:

$$\pi = (s / v) / (c / v + 1)$$

$$\pi = (\varepsilon) / (\theta + 1)$$

## The Labour Theory of Value: One Question, or Two?

Labour Process → Commodity (Labour Value) → Price

- 1. Are prices derived from labour values?
- 2. Do commodities "have" a labour value?
